

infection prevention control week

LET'S TAKE A CLOSER LOOK AT
GLOVE USE IN HEALTH CARE.

1

Gloves **do not** replace the need for hand hygiene as they **do not** provide complete protection against hand contamination. *Contamination of healthcare workers' hands can occur during glove removal or from small defects or micro-perforations in the gloves.*

2

Gloves should be worn when there is a risk of contamination with blood or other bodily fluids.

3

Hand hygiene should be performed **BEFORE** donning gloves and **AFTER** removing gloves.

4

Gloves must be changed between patients and after every episode of patient care.

5

Prolonged and indiscriminate use of gloves should be avoided as it may cause adverse reactions and skin sensitivity.
